WHAT IS CLAIMED

1. Distributor system (1) for the supply of a stationary fuel-cell system with a combustible via a combustible source, the stationary fuel-cell system being assigned to one or more buildings arranged in a stationary quarter and serving for supplying the building or buildings with power and/or heat, and the distributor system having (2) an extraction station in the stationary quarter assigned to the combustible source for supplying mobile consumers with the combustible or with a fuel extracted from the latter, the mobile consumers having a mobile fuel-cell system and a storage tank.

2. Distributor system according to Claim 1,

wherein the combustible source is a line network assigned to the building and/or a reservoir.

3. Distributor system according to Claim 1,

wherein the stationary fuel-cell system has a fuel generation unit for extracting a fuel from the combustible.

4. System according to Claim 3,

wherein the extraction station is connected to the fuel generation unit.

5. System according to Claim 3,

wherein the fuel generation unit is assigned a fuel reservoir.

6. System according to Claim 4,

wherein the fuel generation unit is assigned a fuel reservoir.

7. System according to Claim 1,

wherein the extraction station is assigned means for initiating or carrying out recording and/or payment for combustible and/or fuel for the mobile consumers.

8. System according to Claim 1,

wherein there is arranged in a building of the stationary quarter a stationary fuel-cell system which serves for supplying a plurality of buildings of the stationary quarter with power and/or heat.

9. A fuel distribution system for vehicles with fuel-cell operated power drives, comprising:

a stationary quarter with at least one building,

a building fuel distribution system operable to supply building fuel to said stationery quarter for operating at least one of heat and power systems for the at least one building,

an extraction station located in said stationary quarter operable to extract a portion of the fuel from the building fuel for supplying fuel-cell operated vehicles with said portion as vehicle fuel.

10. A fuel distribution system according to claim 9,

wherein said building fuel distribution system includes a line network supplying said stationary quarter and other fixed locations.

11. A fuel distribution system according to claim 9,

wherein said building fuel is stored in a stationary reservoir at said stationary quarter.

12. A fuel distribution system according to claim 9,

wherein said extraction station includes a means for separating said fuel from the building fuel distribution system into a component especially adapted to serve as fuel for fuel-cell operated vehicles.

13. A fuel distribution system according to claim 9,

wherein said building fuel is natural gas.

14. A fuel distribution system according to claim 10, wherein said building fuel is natural gas.

15. A fuel distribution system according to claim 11, wherein said building fuel is natural gas.

16. A fuel distribution system according to claim 9, wherein said fuel of said building fuel is methanol.

17. A fuel distribution system according to claim 9, wherein said extraction station includes means for extracting hydrogen from said building fuel to serve as said vehicle fuel.

18. A fuel distribution system according to claim 9, wherein said building fuel is one of petrol, alcohol, and ether.

19. A fuel distribution system according to claim 9, wherein said vehicle fuel is hydrogen.

20. A fuel distribution system according to claim 14,

wherein said extraction station includes means for extracting hydrogen from said building fuel to serve as said vehicle fuel.

21. A fuel distribution method for supplying vehicles with fuel-cell operated power drives, comprising:

supplying building fuel to a stationery quarter for operating at least one of heat and power systems for at least one building located in said stationary quarter.

operating an extraction station located in said stationary quarter to extract a portion of the fuel from the building fuel for supplying fuel-cell operated vehicles with said portion as vehicle fuel.

22. A fuel distribution method according to claim 21:

wherein said building fuel distribution system includes a line network supplying said stationary quarter and other fixed locations.

23. A fuel distribution system according to claim 21,

wherein said fuel of said building fuel is stored in a stationary reservoir at said stationary quarter.

24. A fuel distribution system according to claim 21, wherein said extraction station includes a means for separating said fuel from the building fuel distribution system into a component especially adapted to serve as fuel for fuel-cell operated vehicles.

25. A fuel distribution system according to claim 21, wherein said building fuel is natural gas.

26. A fuel distribution system according to claim 22, wherein said building fuel is natural gas.

27. A fuel distribution system according to claim 23, wherein said building fuel is natural gas.

28. A fuel distribution system according to claim 21, wherein said building fuel is methanol.

29. A fuel distribution system according to claim 21, wherein said extraction station includes means for extracting hydrogen from said building fuel to serve as said vehicle fuel.

30. A fuel distribution system according to claim 21, wherein said building fuel is one of petrol, alcohol, and ether.

31. A fuel distribution system according to claim 21, wherein said vehicle fuel is hydrogen.

32. A fuel distribution system according to claim 25, wherein said extraction station includes means for extracting hydrogen from said building fuel to serve as said vehicle fuel.
